Note: Indexes for the most recent six months shown are subject to revision.

(1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the S-level commodity code (from 9 to 28) mm indicates the M-level commodity code (from 14 to 43, 45 to 69) nn indicates either a split of the M-level commodity, or 91, which indicates a special aggregation or 99, which indicates a split of a PCG.

The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (£ + \$5) is given, occasionally these coverage measures are rounded to the nearest 5% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. For further information order industrial Product Price indexes 1981 = 100, Concepts and Methods (Catalogue 62-556).

(1) En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro de code "Databank" de CANSIM (D nnnnnn), un numero d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique prend la forme generale ss-mm-nn-pppp-rr où:

ss indique le code du

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manutacturing Industries is adjusted to match.

L'agrégation des indices par produits ou par industries devraient résulter ou même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera nosé éral

l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera posé égal.

The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality.

Le code numérique à la droite du numéro Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité. (2)

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) Net outflow indexes are calculated for the major groups described by the 1970 Standard Industrial Classification. The 1980 SIC is not used because the Input-Output tables are not yet available on the updated classification.

(1) Les indices des sorties nettes sont calculates pour les groupes principaux dérivés de la Classification des activités économiques de 1970. La classification type des industries de 1980 n'est pas utilisée en raison de l'indisponibilité des tableaux des Entrées-Sorties suivant la nouvelle classification.

# TABLE 6. Electric Power Selling Price Indexes, for Non-residential Customers

# TABLEAU 6. Indices des prix de vente de l'énergie électrique, pour les acheteurs non-résidentiels

Monthly prices are collected and processed three times per annum.
Des prix mensuels sont relevés et calculés trois fois par année.
Indexes for the current year and previous year are subject to revision.
Les indices pour l'année courante et pour l'année précédente sont sujets à révision.

### EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

### Industrial Product Price Indexes, 1981 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1981 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about five weeks after the reference month in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about three weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

### **Price Surveys**

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in

## EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRE DES PRIX INDUSTRIELS

### Indice des prix des produits industriels, 1981 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1981. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ cinq semaines après la fin du mois de référence dans le Quotidien (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indice des prix de l'industrie*, paraît trois semaines environ après le communiqué dans le *Quotidien*. Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

### Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,500 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabilistes, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons

the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1981. The price movement for the remaining 600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

### Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1981 Input Output table which, in turn, is derived from 1981 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in establishments of production patterns.

### Formula

(ann)

Pt/o

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w<sup>i</sup> are the values of the output of each commodity:

sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix, bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1981. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

### Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1981, laquelle à son tour est établie à partir des valeurs de 1981 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

### Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorpores systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle w' sont les valeurs de la production de chaque produit:

mposite de prix a période t pour

ment i au cours

$$P_{to}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{to}^{i}$$

| Pt/o | denotes the composite price index movement between the base period o and time t for the defined aggregate; | P <sub>t/o</sub> | dénote le mouvement de l'indice cor<br>entre la période de référence o et la<br>l'agrégat défini; |
|------|--|------------------|---|
| Wİ   | is the transaction value of the element i in the base period;  | wi               | est la valeur de transaction de l'élém<br>de la période de référence;                             |

is the price index for element i, meaning its 
$$P_{t/0}$$
 est l'indice de prix de l'élément i. désignant sa variation de prix entre la période de référence et la période t;

indicates summation over all elements i in  $\Sigma_i$  signifie la sommation de tous les éléments i dans the defined aggregate.

(ann)

### Historical Data

Historical series on the 1981 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity Groups (PCG) classification. The historical series were obtained by linking together movements from the 1981-based Industrial Product Price Indexes (IPPI) series and the corresponding 1971-based Industry Selling Price Indexes (ISPI) series, using the year 1981 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between the IPPI and ISPI series are available to the public.

#### Reference Document

62-556 Industrial Product Price Indexes, 1981 = 100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. The relationship of the new series to its Industry Selling Price predecessor is given. Comments on index use are also provided.

In the tables will be found weighting patterns for both commodities and commodity groupings. Descriptions of the characteristics of the elemental indexes are provided. A listing is provided of nearest equivalent series in the 1981 = 100 series as they relate to the 1971 = 100 Industry Selling Price Indexes, along with link factors derived from the relationship of the two series in December 1985.

A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

### Données historiques

Les séries historiques sur la base 1981 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits industriels (IPPI) basées sur 1981 et des séries correspondantes des Indices des prix de vente dans l'industrie (IPVI) basées sur 1971, l'année 1981 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les séries IPPI et IPVI sont disponibles au public.

#### Document de référence

62-556 Indices des prix des produits industriels, 1981 = 100, Concepts et méthodes, \$25.00.

Cette publication précise le contenu économique des séries dans le cadre général du système des comptes nationaux, et son impact sur la méthodologie des indices de prix. Elle contient une description des méthodes d'échantillonnage et d'observation des prix, de même que des méthodes de calcul et d'agrégation des indices. Les relations entre la nouvelle série et l'ancienne série des prix de vente dans l'industrie qui l'avait précédée s'y trouvent également. La publication contient des commentaires sur l'utilisation des indices.

Les tableaux contiennent les schémas de pondération à la fois pour les produits et les agrégats des produits. Y figurent également une description des caractéristiques des indices élémentaires ainsi qu'une liste des séries équivalentes les plus proches de la série 1981 = 100, dans la mesure où elles se rapportent aux Indices des prix de vente dans l'industrie 1971 = 100.

La publication contient également un glossaire.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, ou téléphonez au (613)951-9607.

### RAW MATERIALS PRICE INDEXES (1981 = 100)

The Raw Materials Price Indexes measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1981 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 1980.

These indexes are, to a large extent, a continuation of the previously published Raw Materials Price Indexes, 1977 = 100. The new, 1981 = 100 indexes can be linked with their equivalents in the 1977 = 100 series using the link factors which were released in the January 1986 issue and repeated in the February and March issues of this publication. Apart from the change in time and weight base, there have been some minor changes in the structure and methodology. Thus, the previous major group Textiles has been discontinued and the commodities forming it redistributed: cotton is now a part of vegetable products and wool is a part of animal and animal products. Man-made fabrics, which did not satisfy the definition of raw materials, have been excluded from the revised index. At the same time, both the commodity samples and the samples of respondents have been revised and updated to give more reliable estimates of price movement. As a consequence some additional commodity detail is now available.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

### INDICES DES PRIX DES MATIÈRES BRUTES (1981 = 100)

Les Indices des prix des matières brutes mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1981, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 1980 de CANSIM.

Ces indices constituent, dans une large mesure, la suite des Indices des prix des matières brutes, 1977 = 100, précédemment publiés. Les nouvelles séries basées 1981 = 100 peuvent être raccordées à leurs séries équivalentes basées 1977 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de janvier 1986, et répétés dans les numéros de février et de mars 1986, de la présente publication. Outre le changement dans la période de pondération et de référence, de légères modifications ont été apportées à la structure et à la méthodologie. Ainsi, l'ancienne composante principale nommée Matières textiles a été dissoute, et les produits qui en faisaient partie ont été reclassifiés comme suit: le coton se retrouve maintenant avec les substances végétales, et la laine, avec les animaux et substances animales. Ne satisfaisant pas à la définition de matières brutes, les fibres synthétiques ont été exclues du nouvel indice. Par ailleurs, les échantillons à la fois des produits et des répondants ont été révisés et mis à jour afin d'obtenir des estimations plus fiables des mouvements de prix. En conséquence, plus de détails sont maintenant disponibles pour certains produits.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occured for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1981 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These weights are shown in the accompanying table.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

(agg)

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

Les pondérations furent dérivées des tableaux d'entrées-sorties de 1981, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires. Ces pondérations sont présentées au tableau ci-joint.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$$P_{t/0}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/0}^{i}$$

| P <sub>t/o</sub> | denotes the composite price index movement between the base period o and time t for the defined aggregate; | P <sub>t/o</sub> | dénote le mouvement de l'indice composite de priz<br>entre la période de référence o et la période courante<br>t pour l'agrégat spécifié; |
|------------------|--|------------------|---|
| wi               | is the transaction value of the element i in 1981;   | wi               | est la valeur de transaction de l'élément i en 1981;  |
| Pt/o             | is the price index for element i, meaning its price change from the base period to time t;                 | Pt/o             | est l'indice de prix de l'élément i, c'est-à-dire sor<br>changement de prix de la période de référence o à a<br>période courante t;       |
| $\sum_{i}$       | indicates summation over all elements i in   | $\sum_{i}$       | indique la sommation sur tous les éléments i faisan   |

(agg)

Within individual commodity indexes, the prices are weighted according to their market share in 1981 or a more recent year. In a few instances, where data are not available, the price quotations are equally weighted.

the defined aggregate.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

L'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché en 1981 ou pour une année plus récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

partie de l'agrégat spécifié.

### ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1981 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1981 as a time reference base and the weights used are 1981 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1981 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 1979. Indexes for the current year and the previous year are subject to revision.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

### INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1981 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril, d'août et de décembre. Les indices ont comme période de reférence 1981, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1981, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1981 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 1979. Les indices de la présente année et de l'année précédente sont sujets à révision.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, ou téléphonez au (613)951-9607.

# No other monthly report on the Canadian Economy has this much to offer

## La seule publication à vous offrir autant d'information sur l'économie canadienne

### Canadian Economic Observer

The most extensive and timely information source for people who want objective facts and analysis on the Canadian Economy... every

### Current economic conditions

Brief, "to the point" a current update summary of the economy's performance including trend analyses on employment, output, demand and the leading indicator.

### Feature articles

In-depth research on current business and economic issues: business cycles, employment trends, personal savings, business investment plans and corporate concentration.

### Statistical summary

Statistical tables, charts and graphs cover national accounts, output, demand, trade, labour and financial markets.

### Regional analysis

Provincial breakdowns of key economic indicators.

### International overview

Digest of economic performance of Canada's most important trading partners — Europe, Japan and the U.S.

### Economic and statistical events

Each month, CEO also publishes a chronology of current events that will affect the economy, and information notes about new products from Statistics Canada.

### Consult with an expert

The names and phone numbers of the most appropriate Statistics Canada contacts are provided with each data table in the statistical summary; not only can you read the data and the analysis, you can talk to the experts about it.

### The Canadian Economic Observer

(Catalogue no. 11-010) is \$220 annually in Canada, US\$260 in the United States and US\$310 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

For faster service, fax your order to 1-613-951-1584. Or call toll free at 1-800-267-6677 and use your VISA or MasterCard.

### L'Observateur économique canadien

La revue la plus complète et la plus à jour qui soit pour les gens qui désirent des renseignements objectifs et une analyse de l'économie canadienne... chaque mois.

### Les conditions économiques actuelles

Résumé bref et incisif de l'actualité économique du mois, comportant l'analyse des tendances de l'emploi, de la production, de la demande et de l'indicateur avancé.

### Les études spéciales

Recherche approfondie sur les questions du domaine des affaires et de l'économie : cycles économiques, tendances de l'emploi, épargne personnelle, projets d'investissement et concentration des sociétés.

### L'aperçu statistique

Tableaux, graphiques et diagrammes englobant les statistiques des comptes nationaux, de la production, de la demande, du commerce, de l'emploi

et des marchés financiers.

### L'analyse régionale

141 500

Ventilation par province des indicateurs économiques stratégiques.

### Le survol de l'économie internationale

Un sommaire du rendement de l'économie des partenaires commerciaux du Canada, comme l'Europe, le Japon et les États-Unis.

### Événements économiques et statistiques

Chaque mois, L'OEC publie une chronologie des événements qui influenceront l'économie de même que des renseignements sur les nouveaux produits de Statistique Canada.

### Consultez un expert

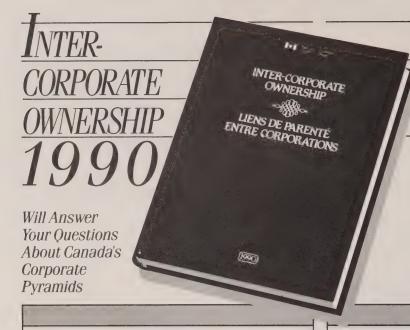

Les noms et numéros de téléphone des personnes-ressources figurent à chaque tableau de l'aperçu statistique; non seulement pouvez-vous lire les données et l'analyse, mais vous pouvez de plus discuter du sujet avec les experts de Statistique Canada.

### L'Observateur économique canadien.

(nº 11-010 au catalogue) coûte 220 \$ l'abonnement annuel au Canada, 260 \$ US aux États-Unis et 310 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

Pour un service plus rapide, commandez par télécopieur au 1-613-951-1584. Ou composez sans frais le 1-800-267-6677 et utilisez votre carte VISA ou MasterCard.

# LIENS DE PARENTÉ ENTRE CORPORATIONS 1990

La publication qui répondra à toutes vos questions sur les pyramides de sociétés au Canada

### Inter-Corporate Ownership 1990

is the most comprehensive and authoritative source of information available on Canadian corporate ownership.

Inter-Corporate Ownership lists over 65,000 corporations providing the names of all holding and held companies, ownership percentages and the position of each within the overall corporate hierarchy.

**Inter-Corporate Ownership** is an indispensable reference source for researching:

- Business-to-business marketing: who owns your corporate clients?
- Purchases: who owns your suppliers?
- Investments: what else does a company own or control?
- Corporate competition: what do your competitors own and control?
- Industrial development: in which province and industry is a corporation active?

Inter-Corporate Ownership 1990 (Cat. no. 61-517) is available for \$325 in Canada and US\$390 in other countries. To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6. Or contact the Statistics Canada Regional Reference Centre nearest you. For faster service, fax your order to 1-613-951-1584. Or call toll-free to 1-800-267-6677 and use your VISA or MasterCard.

Liens de parenté entre corporations 1990 est la source de renseignements la plus fiable et la plus exhaustive que l'on puisse consulter sur les liens de parenté entre sociétés canadiennes.

Vous y trouverez une liste de plus de 65 000 sociétés faisant état du nom de toutes les sociétés actionnaires ou détenues, du degré de parenté exprimé en pourcentage et de la position de chacune au sein de la hiérarchie globale des entreprises.

Elle constitue une source de référence indispensable dans les domaines suivants :

- Commercialisation entre sociétés : qui sont les propriétaires de vos sociétés clientes ?
- Achats : qui sont les propriétaires de vos fournisseurs ?
- Investissements : quelles sociétés l'entreprise en cause possède-t-elle ou contrôle-t-elle ?
- Concurrence entre sociétés : quelles entreprises vos concurrents possèdent-ils ou contrôlent-ils ?
- Expansion industrielle : dans quelle province et dans quel secteur d'activité une société oeuvret-elle ?

Liens de parenté entre corporations 1990 (nº 61-517 au catalogue) se vend 325 \$ au Canada et 390 \$ US à l'étranger. Pour commander, écrivez à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6, ou encore, communiquez avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication). Pour un service plus rapide, télécopiez votre commande au 1-613-951-1584. Ou composez le numéro

sans frais 1-800-267-6677 et utilisez votre VISA ou

MasterCard.

### Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

### **How to Obtain More Information**

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section, Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9607) or to the Statistics Canada reference centre in:

### Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

### Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des industries de biens et de services, Division des prix.

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-9607) ou au centre de consultation de Statistique Canada à:

| St. John's | (772-4073) | Winnipeg  | (983-4020) |
|------------|------------|-----------|------------|
| Halifax    | (426-5331) | Regina    | (780-5405) |

### **ERRATA**

Un certain nombre de séries d'indice de prix des produits industriels, apparaissant au tableau 2 et 3 de la présente publication, furent corrigées au-delà de la période normale de révision de six mois. Le tableau ci-dessous dresse la liste des indices qui furent corrigés et indique la période pour laquelle ces corrections s'appliquent. Les données corrigées paraissent dans le présent numéro de même que sur CANSIM. Les indices agrégés qui ont été affectés par ces révisions sont aussi contenus dans le tableau.

### **Symbols**

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

#### NOTE

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613)951-8200.

®Registered Trade Mark of Statistics Canada.

### Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

### Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

#### NOTA

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissaient pas dans cette publication sont disponibles de CANSIM.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613)951-8200.

### **Highlights**

### Industrial Product Price Index (IPPI)

According to preliminary figures, the Industrial Product Price Index (IPPI, 1981 = 100) rose 0.3% to 131.8 in May 1990. from April's level of 131.4. The largest index increases this month were shown by the primary metal products index (1.1%) followed by the autos, trucks and other transport equipment index (0.8%), meat, fish and dairy products (0.8%) and paper and paper products (0.7%). These were partially offset by the estimated decrease of 0.7% for the petroleum and coal products index and the slight decline of 0.1% for metal fabricated products. These were the only two decreases registered this month. A majority of the increases registered this month were the result of the 1.5% increase, in May, of the U.S. dollar versus its Canadian counterpart and its impact on prices of exported goods and products; mainly affected were autos, trucks and other transportation equipment and paper and paper products.

Since May 1989, the IPPI has risen 0.3%. The year-to-year change was affected most by higher prices for petroleum and coal products (7.2%), for meat, fish and dairy products (2.7%), for machinery and equipment (2.4%), and lumber, sawmill and other wood products (2.5%). These increases were almost completely offset by lower prices for primary metal products (-9.9%), chemical products (-3.9%) and paper and paper products (-1.6%). Excluding petroleum and coal products, the 12-month change was -0.2%.

After an almost steady decline since the beginning of 1989, the primary metal products index jumped 1.1% in May, its second increase in the last three months. Every component showed an increase this month except iron and steel products, down 0.1%. During the past 12 months, the primary metal products index has fallen 9.9%, with decreases ranging from 38.4% for nickel products to 2.3% for iron and steel products, but only 1.1% for other non-ferrous metal products. No component registered an increase.

The index for meat, fish and dairy products rose 0.8% in May due to an increase of 1.8% for meat products. For their part, fish products were down 1.7%. The increase mainly reflected higher prices for fresh or frozen pork (5.9%) and beef and veal (1.19%). Lower prices for fish fillets, steaks, sticks (-3.5%) and for frozen molluscs and crustaceans were the main reason behind the fish products index decline.

According to initial estimates, the petroleum and coal products price index fell 0.7% during the past month, largely as a result of lower prices for fuel oils and other fuel. Over 12 months, the petroleum and coal products index has risen 7.2%.

The machinery and equipment price index has risen 2.4% over the past 12 months, largely due to a 3.8% increase for other specialized machinery and equipment. Marked increases posted by pulp and paper industry machinery (6.4%), sawmill and woodworking machinery (6.9%) and by food preparation machinery (9.8%) were the main contributors. Only the office machines and equipment group showed a decrease over the last 12 months (-1.4%).

### Faits saillants

### Indice des prix des produits industriels (IPPI)

D'après les chiffres préliminaires, l'indice des prix des produits industriels (IPPI, 1981 = 100) se situait en mai 1990 à 131.8, en hausse de 0.3% par rapport au niveau de 131.4 d'avril 1990. Les principales hausses ce mois-ci ont été affichées par l'indice des produits métalliques primaires (1.1%) suivi par l'indice pour les voitures, camions et autre matériel de transport (0.8%), la viande, le poisson et les produits laitiers (0.8%) et le papier et produits connexes (0.7%). Celles-ci ont été partiellement compensées par la baisse estimative de 0.7% de l'indice des produits du pétrole et du charbon et le léger déclin de 0.1% pour les semi-produits métalliques. Ces deux baisses ont été les seules enregistrées au cours du mois. La plupart des hausses affichées ce mois-ci sont dues principalement au gain de 1.5% du dollar américain face au dollar canadien en mai et son impact sur les prix à l'exportation; les groupes principalement affectés sont les voitures, camions et autre matériel de transport et le papier et les produits connexes.

Depuis mai 1989, l'IPPI a augmenté de 0.3%, La variation d'une année à l'autre a été influencée surtout par les augmentations des prix des produits du pétrole et du charbon (7.2%), des viandes, poissons et produits laitiers (2.7%), des machines et matériel (2.4%), et des sciages, produits de scierie et divers (2.5%). Ces augmentations ont été presque complètement neutralisées par la baisse des prix des produits métalliques primaires (-9.9%), des produits chimiques (-3.9%) et du papier et produits connexes (-1.6%). Sans les produits du pétrole et du charbon, la variation sur 12 mois s'est établie à -0.2%.

Après avoir connu une baisse presque continue depuis le début de 1989, l'indice des produits métalliques primaires a affiché une hausse de 1.1% en mai, sa deuxième hausse au cours des trois derniers mois. Chacune des composantes a affiché une hausse, à l'exception des produits du fer et de l'acier (-0.1%). Au cours des 12 derniers mois, l'indice des produits métalliques primaires a reculé de 9.9%, les diminutions allant de 38.4% pour les produits du nickel à 2.3% pour les produits du fer et de l'acier et à 1.1% pour les autres produits de métaux non ferreux. Aucune composante n'a affiché une augmentation.

L'indice de la viande, du poisson et des produits laitiers a augmenté de 0.8% en mai, en raison surtout de la hausse de 1.8% affichée pour les produits de la viande. Pour sa part, la composante des produits du poissons a montré une baisse de 1.7%. La hausse de l'indice de la viande reflétait en partie les majorations de prix pour les variétés fraiches ou congelées pour le porc (5.9%) et le boeuf et le veau (1.1%). Des prix inférieurs pour les filets, tranches et blocs de poisson (-3.5%) et pour les mollusques et crustacés congelés ont été la principale raison de la baisse de l'indice des produits du poisson.

D'après les premières estimations, l'indice des prix des produits du pétrole et du charbon a chuté de 0.7% au cours du dernier mois écoulé, suite surtout à la baisse affichée par les mazouts et autres carburants. Au cours des 12 demiers mois, l'indice du pétrole et du charbon a affiché un gain de 7.2%.

L'indice des prix des machines et du matériel a augmenté de 2.4% au cours des 12 derniers mois, en raison surtout de l'augmentation de 3.8% pour les autres machines et matériel spécialisés. De fortes hausses montrées par les machines pour l'industrie des pâtes et papier (6.4%), des scieries et machines à travailler le bois (6.9%) et par les machines à préparer les aliments (9.8%) ont mené le groupe. Seul le groupe des machines et matériel de bureau a affiché une baisse au cours des 12 derniers mois (-1.4%).

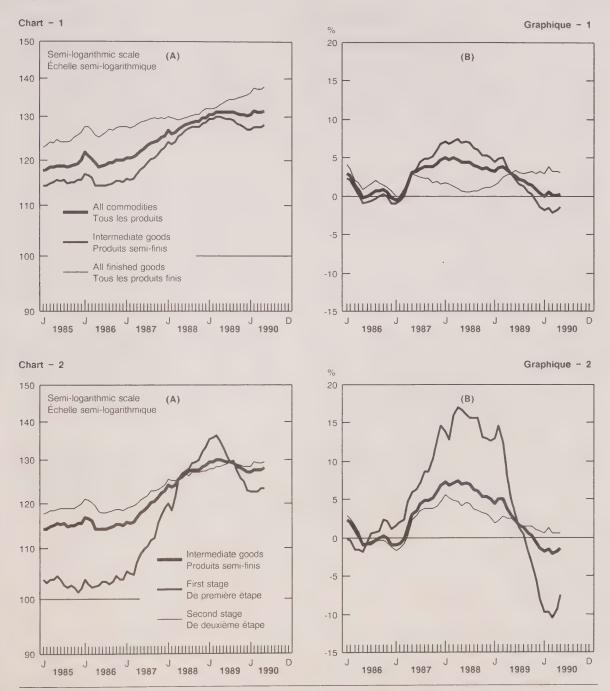

TEXT TABLE I. Industrial Product Price Index (1981 = 100)

### Indexes and Percentage Change<sup>1</sup> in Indexes for Industrial Product Price Indexes Indices et variation proportionnelle<sup>1</sup> en indices pour les indices des prix des produits industriels 1981 = 100

<sup>&</sup>lt;sup>1</sup> Change from same month of previous year.

<sup>1</sup> Variation depuis le même mois que l'année précédente.

### **Highlights**

### Raw Materials Price Index

The Raw Materials Price Index (RMPI, 1981 = 100) declined 2.0% between April and May 1990 to a preliminary level of 99.6. The RMPI excluding the mineral fuels component partially offset downward effect of the mineral fuels index as it rose 1.7%. Of seven components of the RMPI, two fell in May, four rose and one did not change. Between May 1989 and May 1990, the RMPI decreased 3.5%. The RMPI excluding the mineral fuels component was also down, by 0.8%.

The mineral fuels index was down 7.5% in May, mainly as a result of an estimated 9.3% decrease in crude mineral oil prices. Prices for crude mineral oil decreased by 9.7% since May 1989, and caused the mineral fuels index to decline by 7.9%. The annual change has fallen rapidly in recent months as prices were also rising swiftly during this period in 1989. Prices for coal were also marginally down (-0.3%).

The animal and animal products index was up 3.3% over the month , mainly as a result of higher prices for hogs (20.2%). Prices of calves for slaughter also rose (10.9%). Increases in the prices for hogs (57.6%) were also largely responsible for the animal and animal products index annual rise of 7.8%. Prices of fish were up by 14.2%.

The vegetable products index recorded no monthly change as increases and decreases had an equal impact. Prices rose for grains (2.6%) and citrus and tropical fruit (6.4%), while declines were recorded for potatoes (-11.6%), cocoa, coffee & tea (-2.0%), and unrefined sugar (-2.3%). The Vegetable products index was 6.2% below its level a year ago, however, due to lower prices for grains (-9.0%), oilseeds (-12.2%), and citrus & tropical fruits (-9.8%). A partially offsetting effect came from higher prices for unrefined sugar (17.4%).

Compared to its level a year ago, the ferrous materials index was down (-9.6%) as both of its components decreased: iron ore by 5.5% and iron and steel scrap by 15.9%. The non-ferrous metals index was lower by 10.0% as prices for almost all metals have fallen. Only prices for concentrate of lead (up 21.4%) and of copper (up 0.6%) have risen.

### Faits saillants

### Indice des prix des matières brutes

L'indice des prix des matières brutes (IPMB, 1981 = 100) a baissé de 2.0% entre avril et mai 1990 pour atteindre le niveau préliminaire de 99.6. L'IPMB excluant la composante des combustibles minéraux a partiellement compensé, par une hausse de 1.7%, le fléchissement de l'indice des combustibles minéraux. Des sept composantes de l'IPMB, deux ont diminué en mai, quatre ont augmenté et une n'a pas changé. Entre mai 1989 et mai 1990, l'IPMB a baissé de 3.5%. Si l'on exclut la composante des combustibles minéraux, l'IPMB est encore en baisse de 0.8%

L'indice des combustibles minéraux a baissé de 7.5% en mai, en raison surtout de la diminution estimative de 9.3% du prix du pétrole brut. Depuis mai 1989, le prix du pétrole brut a régressé de 9.7% et a fait fléchir l'indice des combustibles minéraux de 7.9%. La variation annuelle a été en chute rapide au cours des récents mois car les prix avait aussi rapidement augmenté durant la même période en 1989. Le prix du charbon a aussi légèrement baissé (-0.3%).

L'indice des prix des animaux et des substances animales a augmenté de 3.3% durant le mois, en raison'surtout de la hausse du prix du porc (20.2%). Le prix des veaux d'abattage a augmenté aussi (10.9%). L'augmentation du prix du porc (57.6%) a été aussi largement responsable de la hausse annuelle de 7.8% de l'indice des prix des animaux et des substances animales. Le prix du poisson a augmenté de 14.2%.

L'indice des substances végétales n'a enregistré aucune variation mensuelle car les hausses et les baisses se sont neutralisées. On a enregistré une augmentation des prix des céréales (2.6%) et des agrumes et fruits tropicaux (6.4%), et une diminution des prix des pommes de terre (-11.6%), du cacao, café et thé (-2.0%) et du sucre non raffiné (-2.3%). Toutefois, l'indice des substances végétales est inférieur de 6.2% au niveau d'il y a un an, en raison du fléchissement des prix des céréales (-9.0%), des oléagineux (-12.2%), et des agrumes et fruits tropicaux (-9.8%). La hausse des prix du sucre non raffiné (17.4%) a eu un effet partiellement neutralisant.

Par rapport au niveau d'il y a un an, l'indice des métaux ferreux est en baisse (-9.6%) en raison de la diminution de ses deux composantes: le minerai de fer (-5.5%) et les déchets de fer et d'acier (-15.9%). L'indice des métaux non ferreux a diminué de 10.0% du fait que le prix de presque tous les métaux a chuté. Seuls les prix des concentrés de plomb (21.4%) et de cuivre (0.6%) ont augmente.

Note: Nota:

This shows the amount by which the movement of each index would move the total in the absence of any change in the other indexes. Ce chiffre donne l'ampleur de la variation qu'occasionnerait dans l'indice d'ensemble un mouvement d'un indice donné si tous les autres indices demeuraient inchangés.
These indexes are preliminary.
Ces indices sont provisoires.

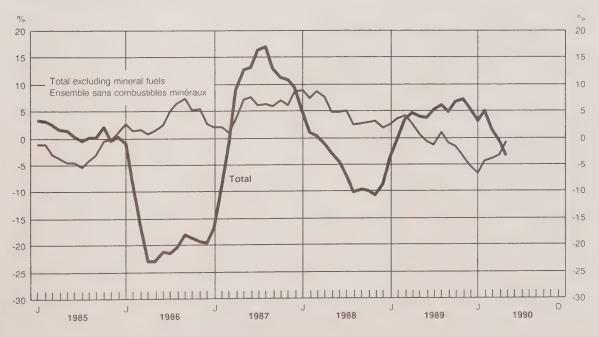

Indexes for the most recent six months shown are subject to revision. Les indices figurant pour les six mois les plus récents sont sujets à révision.

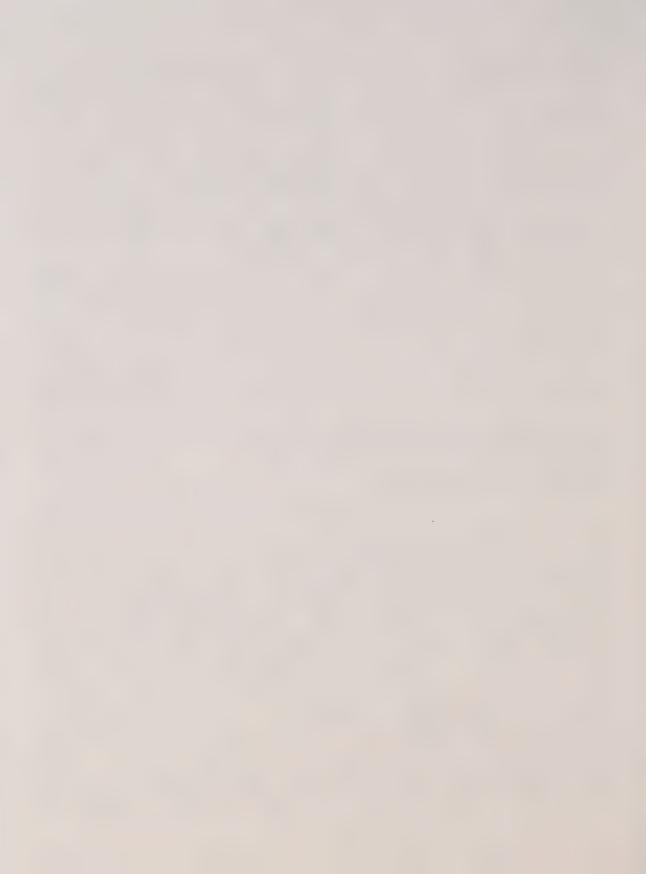

### Raw Materials Price Index Indices des prix des matières brutes

### Percentage Change in the Raw Materials Price Index Variation en pourcentage de l'indice des prix des matières brutes

From same month of previous year Variation depuis le même mois que l'année précédente

<sup>(1)</sup> (1) (2)

Revised.
Révised.
Révise.
The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total – tous les produits devra être considéré comme celui qui fait autorité, et l'indice total – toutes les industries manufacturières sera posé égal. (2)

TABLE 2. Industrial Product Price Indexes, by Commodity and Commodity Aggregations

### TABLEAU 2. Indices des prix des produits industriels, par produits et agrégations des produits

1981 = 100

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the S-level commodity code (from 9 to 28) mm indicates the M-level commodity code (from 1 to 43, 45 to 69) nn indicates the M-level commodity code (from 1 to 43, 45 to 69) nn indicates at special aggregation or 99, which indicates aggregation or 99, which indicates aggregation or 99,

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

(1) L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux différent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera

l'arrondissement, l'indice total à lus les pruduis verte en extendence de procéègal.

The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality.

Le code numérique à la droite du numéro Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité.

| Indexes of net outflows of machinery industries (except electrical) — Indices des sorties nettes des industries de la fabrication de machines (sauf électriques) D 613814       |               |             |               |                     |            |              |                |              |       |      |      |      |         |
| Indexes of net outflows of transportation equipment industries — Indices des sorties nettes des industries de la fabrication de matériel de transport D 613815                  |               |             |               |                     |            |              |                |              |       |      |      |      |         |
| Indexes of net outflows of electrical products industries –<br>Indices des sorties nettes des industries de la<br>fabrication de produits électriques                           |               |             |               |                     |            |              |                |              |       |      |      |      |         |
| D 613816  |               |             |               |                     |            |              |                |              |       |      |      |      |         |
| Indexes of net outflows of non-metallic mineral products industries — Indices des sorties nettes des industries de la fabrication de produits minéraux non métalliques D 613817 |               |             |               |                     | No         |              | ailable a      |              |       |      |      |      |         |
| Indexes of net outflows of petroleum and coal products industries — Indices des sorties nettes des industries de la fabrication de produits du pétrole et du charbon D 613818   |               |             |               |                     |            |              |                | ٠            |       |      |      |      |         |
| Indexes of net outflows of chemical products industries – Indices des sorties nettes des industries chimiques   |               |             |               |                     |            |              |                |              |       |      |      |      |         |
| D 613819  |               |             |               |                     |            |              |                |              |       |      |      |      |         |
| Indexes of net outflows of miscellaneous manufacturing industries – Indices des sorties nettes des industries manufacturières diverses D 613820                                 |               |             |               |                     |            |              |                |              |       |      |      |      |         |

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) Net outflow indexes are calculated for the major groups described by the 1970 Standard Industrial Classification. The 1980 SIC is not used because the input-Output tables are not yet available on the updated classification.

(1) Les indices des sorties nettes sont calculés pour les groupes principaux dérivés de la Classification des activités économiques de 1970. La classification type des industries de 1980 n'est pas utilisée en raison de l'indisponibilité des tableaux des Entrées-Sorties suivant la nouvelle classification

TABLE 6. Electric Power Selling Price Indexes, for Non-residential Customers

#### TABLEAU 6. Indices des prix de vente de l'énergie électrique, pour les acheteurs non-résidentiels

Monthly prices are collected and processed three times per annum.
Des prix mensuels sont relevés et calculés trois fois par année.
Indexes for the current year and previous year are subject to revision.
Les indices pour l'année courante et pour l'année précédente sont sujets à révision.

#### TABLEAU 7. Indices des prix des matières brutes

1981 = 100

|  |                                      |   |   | 1901 - 10                                 |   |   |                                  |                                  |                                  |                                  |                                  |                                  |                                  |                                  |

# EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

#### Industrial Product Price Indexes, 1981 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1981 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about five weeks after the reference month in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about three weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

#### **Price Surveys**

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in

# EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRE DES PRIX INDUSTRIELS

#### Indice des prix des produits industriels, 1981 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1981. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ cinq semaines après la fin du mois de référence dans le Quotidien (nº 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication nº 62-011 au catalogue, *Indice des prix de l'industrie*, paraît trois semaines environ après le communiqué dans le *Quotidien*. Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

#### Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,500 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabilistes, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons

the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1981. The price movement for the remaining 600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

#### Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1981 Input Output table which, in turn, is derived from 1981 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in establishments of production patterns.

#### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w<sup>i</sup> are the values of the output of each commodity:

sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix. bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1981. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

#### Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1981, laquelle à son tour est établie à partir des valeurs de 1981 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

#### Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle w' sont les valeurs de la production de chaque produit:

$$P_{to}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

(agg)
Pt/o denotes the composite price index movement between the base period o and time t for the defined aggregate;

is the transaction value of the element i in the base period;

 $P_{t/0}^{'}$  is the price index for element i, meaning its price change from the base period to time t;

(agg)
Pt/o dénote le mouvement de l'indice composite de prix entre la période de référence o et la période t pour l'agrégat défini;

 est la valeur de transaction de l'élément i au cours de la période de référence;

 $P_{t/0}^{i}$  est l'indice de prix de l'élément i, désignant sa variation de prix entre la période de référence et la période t;

 $\Sigma_i$  signifie la sommation de tous les éléments i dans l'agrégat défini.

 $\Sigma_{\rm i}$  indicates summation over all elements i in the defined aggregate.

#### Historical Data

Historical series on the 1981 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity Groups (PCG) classification. The historical series were obtained by linking together movements from the 1981-based Industrial Product Price Indexes (IPPI) series and the corresponding 1971-based Industry Selling Price Indexes (ISPI) series, using the year 1981 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between the IPPI and ISPI series are available to the public.

#### Reference Document

62-556 Industrial Product Price Indexes, 1981 = 100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. The relationship of the new series to its Industry Selling Price predecessor is given. Comments on index use are also provided.

In the tables will be found weighting patterns for both commodities and commodity groupings. Descriptions of the characteristics of the elemental indexes are provided. A listing is provided of nearest equivalent series in the 1981 = 100 series as they relate to the 1971 = 100 Industry Selling Price Indexes, along with link factors derived from the relationship of the two series in December 1985.

A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

#### Données historiques

Les séries historiques sur la base 1981 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits industriels (IPPI) basées sur 1981 et des séries correspondantes des Indices des prix de vente dans l'industrie (IPVI) basées sur 1971, l'année 1981 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les séries IPPI et IPVI sont disponibles au public.

#### Document de référence

62-556 Indices des prix des produits industriels, 1981 = 100, Concepts et méthodes, \$25.00.

Cette publication précise le contenu économique des séries dans le cadre général du système des comptes nationaux, et son impact sur la méthodologie des indices de prix. Elle contient une description des méthodes d'échantillonnage et d'observation des prix, de même que des méthodes de calcul et d'agrégation des indices. Les relations entre la nouvelle série et l'ancienne série des prix de vente dans l'industrie qui l'avait précédée s'y trouvent également. La publication contient des commentaires sur l'utilisation des indices.

Les tableaux contiennent les schémas de pondération à la fois pour les produits et les agrégats des produits. Y figurent également une description des caractéristiques des indices élémentaires ainsi qu'une liste des séries équivalentes les plus proches de la série 1981 = 100, dans la mesure où elles se rapportent aux Indices des prix de vente dans l'industrie 1971 = 100.

La publication contient également un glossaire.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, ou téléphonez au (613)951-9607.

#### RAW MATERIALS PRICE INDEXES (1981 = 100)

The Raw Materials Price Indexes measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1981 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 1980.

These indexes are, to a large extent, a continuation of the previously published Raw Materials Price Indexes, 1977 = 100. The new, 1981 = 100 indexes can be linked with their equivalents in the 1977 = 100 series using the link factors which were released in the January 1986 issue and repeated in the February and March issues of this publication. Apart from the change in time and weight base, there have been some minor changes in the structure and methodology. Thus, the previous major group Textiles has been discontinued and the commodities forming it redistributed: cotton is now a part of vegetable products and wool is a part of animal and animal products. Man-made fabrics, which did not satisfy the definition of raw materials, have been excluded from the revised index. At the same time, both the commodity samples and the samples of respondents have been revised and updated to give more reliable estimates of price movement. As a consequence some additional commodity detail is now available.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

#### INDICES DES PRIX DES MATIÈRES BRUTES (1981 = 100)

Les Indices des prix des matières brutes mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonce en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1981, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 1980 de CANSIM.

Ces indices constituent, dans une large mesure, la suite des Indices des prix des matières brutes, 1977 = 100, précédemment publiés. Les nouvelles séries basées 1981 = 100 peuvent être raccordées à leurs séries équivalentes basées 1977 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de janvier 1986, et repétés dans les numéros de février et de mars 1986, de la présente publication. Outre le changement dans la période de pondération et de référence, de légères modifications ont été apportées à la structure et à la méthodologie. Ainsi, l'ancienne composante principale nommée Matières textiles a été dissoute, et les produits qui en faisaient partie ont été reclassifiés comme suit: le coton se retrouve maintenant avec les substances végétales, et la laine, avec les animaux et substances animales. Ne satisfaisant pas à la définition de matières brutes, les fibres synthétiques ont été exclues du nouvel indice. Par ailleurs, les échantillons à la fois des produits et des répondants ont été révisés et mis à jour afin d'obtenir des estimations plus fiables des mouvements de prix. En conséquence, plus de détails sont maintenant disponibles pour certains produits.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occured for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1981 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These weights are shown in the accompanying table.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes qouvernementaux.

Les pondérations furent dérivées des tableaux d'entrées-sorties de 1981, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires. Ces pondérations sont présentées au tableau ci-joint.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

| (agg) |  |  |
|-------|--|--|
| Pt/o  | denotes the composite price index      |  |
|       | movement between the base period o and |  |
|       | time t for the defined aggregate;      |  |
|       |  |  |

wi is the transaction value of the element i in 1981;

 $\dot{P_{t/0}}$  is the price index for element i, meaning its price change from the base period to time t;

 $\sum_{i} \qquad \text{indicates summation over all elements i in the defined aggregate}.$ 

(agg)
Pt/O dénote le mouvement de l'indice composite de prix entre la période de référence o et la période courante t pour l'agrégat spécifié;

wi est la valeur de transaction de l'élément i en 1981;

est l'indice de prix de l'élément i, c'est-à-dire son changement de prix de la période de référence o à a période courante t;

 $\Sigma_{i}$  indique la sommation sur tous les éléments i faisant partie de l'agrégat spécifié.

Within individual commodity indexes, the prices are weighted according to their market share in 1981 or a more recent year. In a few instances, where data are not available, the price quotations are equally weighted.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

L'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché en 1981 ou pour une année plus récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, ou téléphonez au (613)951-9607.

# ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1981 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1981 as a time reference base and the weights used are 1981 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1981 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 1979. Indexes for the current year and the previous year are subject to revision.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

#### INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1981 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril, d'août et de décembre. Les indices ont comme période de reférence 1981, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1981, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1981 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 1979. Les indices de la présente année et de l'année précédente sont sujets à révision.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, ou téléphonez au (613)951-9607.

# What happened to the cost of living last month?

## he Consumer Price Index will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), The Consumer Price Index gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

- transportation
   health and personal care
- food
- recreation, reading and education
- clothing
- tobacco products and alcoholic
- housing beverages

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of change.

#### Get the facts.

Subscribe to The Consumer Price Index (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian consumer dollar. A subscription to this monthly is available for \$93 in Canada, US\$112 in the United States and US\$130 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

# Qu'en était-il du coût de la vie le mois dernier?

'indice des prix à la consommation répond à votre auestion.

Que vous ayez à négocier des règlements salariaux, à administrer des clauses d'indemnité de vie chère ou à évaluer des politiques gouvernementales, que vous vous occupiez du renouvellement de contrats, de pensions alimentaires ou d'allocations d'entretien, vous avez besoin de données récentes et détaillées sur les fluctuations du coût de la vie.

Établi mensuellement, et publié dans les 20 jours suivant la fin de chaque mois, L'indice des prix à la consommation vous renseigne de façon précise sur les plus récentes fluctuations des prix à la consommation.

Cette publication mensuelle porte sur:

- l'alimentation
- l'habillement
- l'habitation
- · le transport
- la santé et les soins personnels
- les loisirs, la lecture et la formation
- les produits du tabac et les boissons alcoolisées

Plus de 400 articles sont inclus, allant du lait au stationnement en passant par l'ameublement de maison et le matériel de lecture.

Les indices de prix sont donnés pour l'ensemble du pays et 18 principales villes canadiennes. Chaque numéro présente des comparaisons des pourcentages mois après mois et les tendances au cours des cinq dernières années. En outre, chaque numéro analyse les principales causes de changement.

#### Abonnez-vous!

L'indice des prix à la consommation (n° 62-001 au catalogue) vous permet d'obtenir une évaluation fiable du pouvoir d'achat du dollar canadien. L'abonnement à cette publication mensuelle coûte 93 \$ au Canada, 112 \$ US aux États-Unis et 130 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1 A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

# INTERESTED IN ACQUIRING A CANADIAN ORIGINAL?

Then **Canadian Social Trends** is the acquisition for you. A first on the Canadian scene, this journal is claiming international attention from the people who need to know more about the social issues and trends of this country.

Drawing on a wealth of statistics culled from hundreds of documents, *Canadian Social Trends* looks at Canadian population dynamics, crime, education, social security, health, housing, and more.

For social policy analysts, for trendwatchers on the government or business scene, for educators and students, *Canadian Social Trends* provides the information for an improved discussion and analysis of Canadian social issues.

Published four times a year, *Canadian Social Trends* also features the latest social indicators, as well as information about new products and services available from Statistics Canada.

#### CANADIAN SOCIAL TRENDS

(Catalogue No. 11-008E) is \$34 annually in Canada, US\$40 in the United States and US\$48 in other countries.

To order, write to Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

For faster service, fax your order to 1-613-951-1584. Or call toll free 1-800-267-6677 and use your VISA or MasterCard.

# VOUS DÉSIREZ FAIRE L'ACQUISITION D'UNE OEUVRE ORIGINALE?

Alors **Tendances sociales canadiennes** est la publication qu'il vous faut. Première en son genre sur la scène canadienne, cette revue retient l'attention des gens d'ici et d'ailleurs qui désirent en savoir plus sur les questions sociales de l'heure au pays.

À l'aide d'abondantes statistiques extraites de nombreux documents, *Tendances sociales canadiennes* brosse le tableau de la dynamique de la population canadienne, de la criminalité, de l'éducation, de la sécurité sociale, de la santé, de l'habitation et de plusieurs autres sujets.

Que ce soit pour les analystes de la politique sociale, les analystes des tendances oeuvrant au sein des administrations publiques et du monde des affaires, les enseignants ou encore les étudiants, *Tendances sociales canadiennes* dégage l'information nécessaire à des discussions et des analyses approfondies relativement aux questions sociales.

**Tendances sociales canadiennes** présente également les plus récents indicateurs sociaux de même que des renseignements relatifs aux produits et services qu'offre Statistique Canada.

#### TENDANCES SOCIALES CANADIENNES

#### Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

#### How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section, Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9607) or to the Statistics Canada reference centre in:

| St. John's | (772-4073) | Winnipeg  | (983-4020) |
|------------|------------|-----------|------------|
| Halifax    | (426-5331) | Regina    | (780-5405) |
| Montréal   | (283-5725) | Edmonton  | (495-3027) |
| Ottawa     | (951-8116) | Calgary   | (292-6717) |
| Toronto    | (973-6586) | Vancouver | (666-3691) |

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

#### Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

#### Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des industries de biens et de services, Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-9607) ou au centre de consultation de Statistique Canada à:

| St. John's | (772-4073) | Winnipeg  | (983-4020) |
|------------|------------|-----------|------------|

### **Symbols**

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- <sup>p</sup> preliminary figures.
- revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

#### NOTE

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613)951-8200.

®Registered Trade Mark of Statistics Canada.

#### Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

### Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- ' nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

#### **NOTA**

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissaient pas dans cette publication sont disponibles de CANSIM.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613)951-8200.

# **Highlights**

#### **Industrial Product Price Index (IPPI)**

According to preliminary figures, the Industrial Product Price Index (IPPI, 1981 = 100) edged down 0.1% to 131.7 in June 1990, from May's level of 131.8. This slight decrease follows a 0.4% increase in May 1990. The largest index increases this month were shown by the meat, fish and dairy products (0.5%) and paper and paper products (0.3%). These were more than offset by the decreases in the primary metal products index (1.2%) followed by the autos, trucks and other transport equipment (0.5%) and lumber, sawmill and other wood products (0.4%). The 0.8% decrease, in June, of the U.S. dollar versus its Canadian counterpart and its impact on prices of exported goods and products affected mainly the autos, trucks and other transportation equipment.

Since June 1989, the IPPI has risen 0.2%. The year-to-year change was affected most by higher prices for petroleum and coal products (5.3%), meat, fish and dairy products (3.1%), machinery and equipment (2.4%) and beverages (3.4%). These increases were almost completely offset by lower prices for primary metal products (-8.5%), chemical products (-3.4%) and paper and paper products (-1.6%). Excluding petroleum and coal products, the 12-month change was -0.3%.

Following an increase of 1.1% in May 1990, the primary metal products index fell 1.2% in June. Decreases of 6.0% for both copper and copper alloy products and nickel products lead the way. The aluminum products index was the only one with an increase this month (0.2%). Over the past 12 months, the primary metal products index has fallen 8.5%, with decreases ranging from 31.3% for nickel products to 2.0% for iron and steel products, but only 0.3% for copper and copper alloy products. No component registered an increase.

In June 1990, the lumber, sawmill and other wood products index as well as the electrical and communication products index showed a decrease of 0.4%. In the first case, lower prices in general for softwood lumber from British Columbia (-1.0%) coupled with lower prices for plywood, Douglas fir (-3.1%) led the downward movement. Price reductions for electric wire and cable as well as for some lighting fixtures were the main reason behind the monthly index decline of the second group.

The index for meat, fish and dairy products rose 0.5% in June due to an increase of 0.7% for meat products. The increase partly reflected higher prices for fresh or frozen pork (2.5%) and meat, cured (2.7%). The fish products index showed a 0.6% increase this month pushed by higher prices for fish fillets, steaks, sticks (2.2%) on the export market.

The index for paper and paper products showed an increase of 0.3% in June, despite the downward effect of the exchange rate, mainly because of higher prices for newsprint paper on both domestic (4.6%) and export markets (3.2%). This upward pressure was largely neutralised by lower prices for woodpulp, sulfphate (-1.2%), for liner board (-3.9%) and corrugating container board (-3.7%).

#### Faits saillants

#### Indice des prix des produits industriels (IPPI)

D'après les chiffres préliminaires, l'indice des prix des produits industriels (IPPI, 1981 = 100) se situait en juin 1990 à 131.7, en baisse de 0.1% par rapport au niveau de 131.8 de mai 1990. Ce léger recul suit l'augmentation de 0.4% affichée en mai 1990. Les principales hausses ce mois-ci ont été affichées par l'indice de la viande, le poisson et les produits laitiers (0.5%) et le papier et produits connexes (0.3%). Celles-ci ont été plus que compensées par la baisse de 1.2% affichée par les produits métalliques primaires ainsi que par celles pour les autos, camions et autre matériel de transport (0.5%) et les sciages, produits de scierie et divers (0.4%). La baisse de 0.8% du dollar américain face au dollar canadien en juin et son impact sur les prix à l'exportation a principalement affecté le groupe des voitures, camions et autre matériel de transport.

Depuis juin 1989, l'IPPI a augmenté de 0.2%, La variation d'une année à l'autre a été influencée surtout par les augmentations des prix des produits du pétrole et du charbon (5.3%), des viandes, poissons et produits laitiers (3.1%), des machines et matériel (2.4%) et des boissons (3.4%). Ces augmentations ont été partiellement compensées par la baisse des prix des produits métalliques primaires (-8.5%), des produits chimiques (-3.4%) et du papier et produits connexes (-1.6%). Sans les produits du pétrole et du charbon, la variation sur 12 mois se serait établie à -0.3%.

Après avoir connu une hausse de 1.1% en mai 1990, l'indice des produits métalliques primaires a affiché une recul de 1.2% en juin 1990. Les baisses de 6.0% enregistrées par les produits du cuivre et les alliages de cuivre ainsi que par les produits du nickel ont mené le groupe. Seul les produits de l'aluminium ont connu une hausse (0.2%) au cours de juin. Au cours des 12 derniers mois, l'indice des produits métalliques primaires a reculé de 8.5%, les diminutions allant de 31.3% pour les produits du nickel à 2.0% pour les produits du fer et de l'acier et à seulement 0.3% pour les produits du cuivre et alliages de cuivre. Aucune composante n'a affiché une augmentation.

Les groupes des sciages, produits de scierie et divers ainsi que celui des appareils électriques et de télécommunications ont vu leur indice s'incliné de 0.4% en juin 1990. Dans le premier cas, des prix généralement plus bas pour le bois de construction, de résineux venant de la Colombie-Britannique (-1.0%) de même que pour le contre-plaqué de sapin de Douglas (-3.1%) ont poussé l'indice du groupe à la baisse. Des prix inférieurs pour les fils et câbles électriques de même que pour certains appareils d'éclairage sont la principale cause de la baisse de l'indice du second groupe.

L'indice de la viande, du poisson et des produits laitiers a augmenté de 0.5% en juin, en raison surtout de la hausse de 0.7% affichée pour les produits de la viande. Ceci reflétait en partie les majorations de prix pour les variétés fraiches ou congelées pour le porc (2.5%) et la viande de salaison (2.7%) Pour sa part, la composante des produits du poisson a montré une hausse de 0.6% en juin, en raison de prix plus élevés pour les filets, tranches et blocs de poisson (2.2%) destinés à l'exportation.

L'indice du papier et produits connexes a affiché une hausse de 0.3% en juin, malgré l'impact à la baisse du taux de change, en raison principalement de la hausse des prix du papier journal tant sur le marché domestique (4.6%) que sur celui à l'exportation (3.2%). Ce mouvement à la hausse a été largement neutralisé par la baisse de 1.2% affichée pour les pâtes de bois, au sulfate ainsi que par les diminutions de 3.9% pour le carton doublure et de 3.7% pour le carton ondulé, pour contenants.

# **Highlights**

#### **Raw Materials Price Index**

The Raw Materials Price Index (RMPI, 1981 = 100) declined 0.7% between May and June 1990 to a preliminary level of 98.9. The RMPI excluding the mineral fuels component declined by 0.7%. Of seven components of the RMPI, six fell in June, and one rose. Between June 1989 and June 1990, the RMPI decreased 3.6%. The RMPI excluding the mineral fuels component declined 1.0%.

The mineral fuels index was down 0.9% from May, as a result of an estimated 1.0% decrease in crude mineral oil prices. It was also down from June 1989, 7.9%, due largely to 9.6% drop in prices for crude mineral oil.

The vegetable products index decreased over the month by 2.9% as prices for all major commodities declined, such as grains (-4.0%), oilseeds (-4.5%) and unrefined sugar (-6.4). Over the year, the Vegetable products index declined 6.7% due to lower prices for grains (-11.0%), oilseeds (-9.4%), and cocoa, coffee & tea (-17.1).) A partially offsetting effect came from higher prices for unrefined sugar (8.9%).

Compared to May, the non-ferrous metals index was down by 3.4% led by lower prices for concentrates of copper (-7.9%) and nickel (-5.2%), and precious metals (-5.7%) concentrates of lead prices were up marginally. The index declined by 9.8% since June 1989 as prices for almost all metals fell; the majority of them by at least ten percent. Only prices for lead concentrate have risen (12.8%).

Only the animal and animal products index rose over the month, by 1.1%. Higher prices for hogs (7.9%) were partially offset by lower prices for cattle for slaughter (-0.7%) and furs, hides & skins (-12.7). Annual increases in the prices for hogs (30.0%), cattle for slaughter (6.2%), and fish (14.2%) were largely responsible for the animal and animal products index to have risen by 7.5% since a year ago.

# Faits saillants

#### Indice des prix des matières brutes

L'indice des prix des matières brutes (IPMB, 1981 = 100) a baissé de 0.7% entre mai et juin 1990 pour s'établir au niveau préliminaire de 98.9. L'IPMB, à l'exclusion de la composante des combustibles minéraux, a enregistré une baisse de 0.7%. Des sept composantes de l'IPMB, six ont diminué en juin et une a augmenté. Entre juin 1989 et juin 1990, l'IPMB a régressé de 3.6%. Si l'on exclut la composante des combustibles minéraux, l'IPMB a fléchi de 1.0%.

L'indice des combustibles minéraux a baissé de 0.9% par rapport à celui du mois de mai en raison de la diminution estimative de 1.0% du prix du pétrole brut. Par rapport au niveau de juin 1989, il a également affiché un recul de 7.9% qui est principalement attribuable au fléchissement de 9.6% du prix du pétrole brut.

L'indice des substances végétales a diminué de 2.9% durant le mois, en raison de la baisse des prix de tous les principaux produits comme les céréales (-4.0%), les oléagineux (-4.5%) et le sucre non raffiné (-6.4%). Au cours de l'année, cet indice a régressé de 6.7% en raison d'un recul des prix des céréales (-11.0%), des oléagineux (-9.4%) et du cacao, du café et du thé (-17.19%). La hausse du prix du sucre non raffiné (8.9%) a eu un effet partiellement neutralisant.

Comparativement au niveau de mai, l'indice des métaux non ferreux a affiché une baisse de 3.4%, surtout attribuable à la diminution des prix des concentrés de cuivre (-7.9%), de nickel (-5.2%) et de métaux précieux (-5.7%). Les prix des concentrés de plomb ont accusé une augmentation marginale. Depuis juin 1989, l'indice a diminué de 9.8% en raison de la baisse des prix de presque tous les métaux, dont la majorité ont régressé d'au moins 10%. Seul le prix des concentrés de plomb a augmenté (12.8%).

Durant le mois, la seule augmentation enregistrée, a été celle de 1.1% de l'indice des prix des animaux et des substances animales. La hausse du prix du porc (7.9%) a été en partie contrebalancée par la diminution des prix des bovins envoyés à l'abattage (-0.7%) et des fourrures, du cuir et des peaux (-12.7%). Les hausses annuelles des prix du porc (30.0%), des bovins envoyés à l'abattage (6.2%) et du poisson (14.2%) ont principalement contribué à l'augmentation de 7.5% de l'indice des prix des animaux et des substances animales par rapport au niveau d'il y a un an.

Indexes for the most recent six months shown are subject to revision. Les indices figurant pour les six mois les plus récents sont sujets à révision. Nota:

This shows the amount by which the movement of each index would move the total in the absence of any change in the other indexes. Ce chiffre donne l'ampleur de la variation qu'occasionnerait dans l'indice d'ensemble un mouvement d'un indice donné si tous les autres indices demeuraient (1) inchangés.

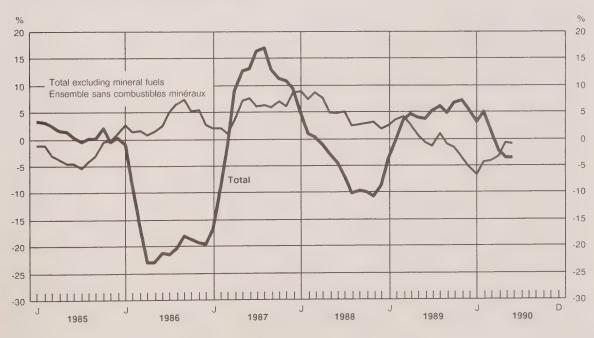

These indexes are preliminary. Ces indices sont provisoires.

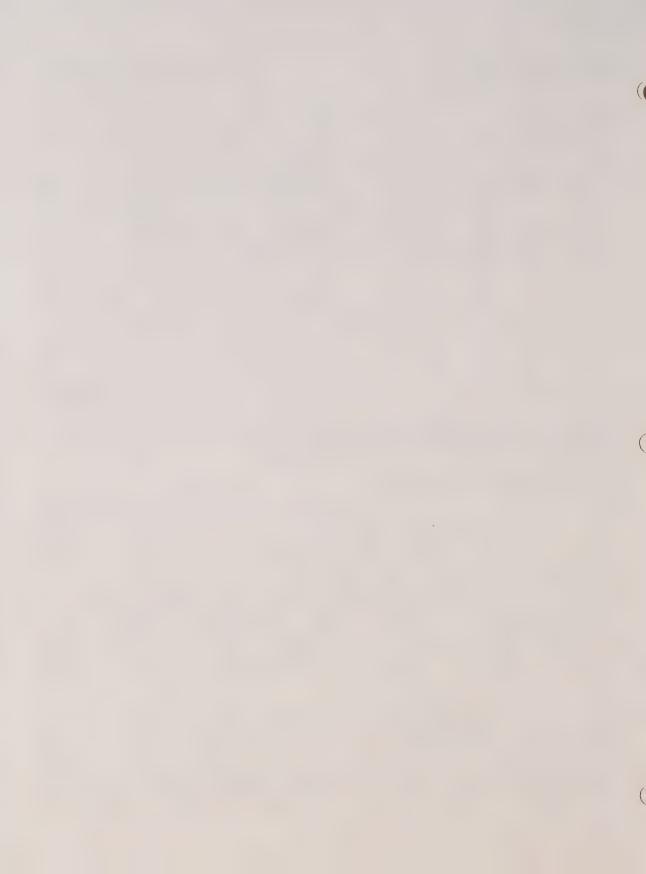

# Raw Materials Price Index Indices des prix des matières brutes

# Percentage Change in the Raw Materials Price Index Variation en pourcentage de l'indice des prix des matières brutes

From same month of previous year Variation depuis le même mois que l'année précédente

<sup>(1)</sup> (1) (2)

Révised.
Révisé.
The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total – tous les produits devra être considéré comme celui qui lait autorité, et l'indice total – toutes les industries manufacturières sera posé égal. (2)

Note: Indexes for the most recent six months shown are subject to revision.

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices ligrant pour les six mois les plus récents sons sujets à révision.

(1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the S-level commodity code (from 9 to 28) mm indicates the M-level commodity code (from 14 to 43, 45 to 69) nn indicates either a split of the M-level commodity, or 91, which indicates a special aggregation or 99, which indicates a special details: pppp indicates the PCG code (except for some special aggregations which include several PCGs). The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E+S) is given, occasionally these coverage measures are rounded to the nearest 5% to preserve contidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. For further information order Industrial Product Price Indexes 1981 = 100, Concepts and Methods (Catalogue 82-556).

(1) En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique, une mesure du degré de couverture pour les indices élémentaires est présentée à l'aide d'un symbole: E indique un écha

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

(1) L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux différent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera posé égal.

(2) The numeric code to the right of the CANSM databable united to the considére comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera posé égal.

posé égal.
The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality.

Le code numerique à la droite du numéro Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près alin de préserver la confidentialité.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) Net outflow indexes are calculated for the major groups described by the 1970 Standard Industrial Classification. The 1980 SIC is not used because the Input-Output tables are not yet available on the updated classification.

(1) Les indices des sorties nettes sont calculates pour les groupes principaux dérivés de la Classification des activités économiques de 1970. La classification type des industries de 1980 n'est pas utilisée en raison de l'indisponibilité des tableaux des Entrées-Sorties suivant la nouvelle classification.

Monthly prices are collected and processed three times per annum.
Des prix mensuels sont relevés et calculés trois fois par année.
Indexes for the current year and previous year are subject to revision.
Les indices pour l'année courante et pour l'année précédente sont sujets à révision.

# TABLEAU 7. Indices des prix des matières brutes

1981 = 100

# EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

### Industrial Product Price Indexes, 1981 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1981 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about five weeks after the reference month in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about three weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

### **Price Surveys**

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in

# EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRE DES PRIX INDUSTRIELS

# Indice des prix des produits industriels, 1981 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1981. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ cinq semaines après la fin du mois de référence dans le Quotidien (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indice des prix de l'industrie*, paraît trois semaines environ après le communiqué dans le *Quotidien*. Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

#### Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,500 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabilistes, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons

the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1981. The price movement for the remaining 600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

#### Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1981 Input/Output table which, in turn, is derived from 1981 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in establishments of production patterns.

#### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w<sup>i</sup> are the values of the output of each commodity:

sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix. bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1981. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

#### Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1981, laquelle à son tour est établie à partir des valeurs de 1981 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

#### Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle w' sont les valeurs de la production de chaque produit:

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

| (agg) |              |        |           |        |        |    |      |
|-------|--------------|--------|-----------|--------|--------|----|------|
| Pt/o  | denotes      | the    | compos    | site   | price  | ir | ide> |
|       | movement     | t betw | een the   | base   | period | 0  | and  |
|       | time t for t | he de  | fined agg | gregat | e;     |    |      |
|       |              |        |           |        |        |    |      |

$$\Sigma_{\rm i}$$
 indicates summation over all elements i in the defined aggregate.

#### Historical Data

Historical series on the 1981 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity Groups (PCG) classification. The historical series were obtained by linking together movements from the 1981-based Industrial Product Price Indexes (IPPI) series and the corresponding 1971-based Industry Selling Price Indexes (ISPI) series, using the year 1981 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between the IPPI and ISPI series are available to the public.

#### Reference Document

62-556 Industrial Product Price Indexes, 1981 = 100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. The relationship of the new series to its Industry Selling Price predecessor is given. Comments on index use are also provided.

In the tables will be found weighting patterns for both commodities and commodity groupings. Descriptions of the characteristics of the elemental indexes are provided. A listing is provided of nearest equivalent series in the 1981 = 100 series as they relate to the 1971 = 100 Industry Selling Price Indexes, along with link factors derived from the relationship of the two series in December 1985.

A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

#### Données historiques

Les séries historiques sur la base 1981 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits industriels (IPPI) basées sur 1981 et des séries correspondantes des Indices des prix de vente dans l'industrie (IPVI) basées sur 1971, l'année 1981 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les séries IPPI et IPVI sont disponibles au public.

#### Document de référence

62-556 Indices des prix des produits industriels, 1981 = 100, Concepts et méthodes, \$25.00.

Cette publication précise le contenu économique des séries dans le cadre général du système des comptes nationaux, et son impact sur la méthodologie des indices de prix. Elle contient une description des méthodes d'échantillonnage et d'observation des prix, de même que des méthodes de calcul et d'agrégation des indices. Les relations entre la nouvelle série et l'ancienne série des prix de vente dans l'industrie qui l'avait précédée s'y trouvent également. La publication contient des commentaires sur l'utilisation des indices.

Les tableaux contiennent les schémas de pondération à la fois pour les produits et les agrégats des produits. Y figurent également une description des caractéristiques des indices élémentaires ainsi qu'une liste des séries équivalentes les plus proches de la série 1981 = 100, dans la mesure où elles se rapportent aux Indices des prix de vente dans l'industrie 1971 = 100.

La publication contient également un glossaire.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, ou téléphonez au (613)951-9607.

# RAW MATERIALS PRICE INDEXES (1981 = 100)

The Raw Materials Price Indexes measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1981 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 1980.

These indexes are, to a large extent, a continuation of the previously published Raw Materials Price Indexes. 1977 = 100. The new, 1981 = 100 indexes can be linked with their equivalents in the 1977 = 100 series using the link factors which were released in the January 1986 issue and repeated in the February and March issues of this publication. Apart from the change in time and weight base, there have been some minor changes in the structure and methodology. Thus, the previous major group Textiles has been discontinued and the commodities forming it redistributed: cotton is now a part of vegetable products and wool is a part of animal and animal products. Man-made fabrics, which did not satisfy the definition of raw materials, have been excluded from the revised index. At the same time, both the commodity samples and the samples of respondents have been revised and updated to give more reliable estimates of price movement. As a consequence some additional commodity detail is now available.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

# INDICES DES PRIX DES MATIÈRES BRUTES (1981 = 100)

Les Indices des prix des matières brutes mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1981, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 1980 de CANSIM

Ces indices constituent, dans une large mesure, la suite des Indices des prix des matières brutes, 1977 = 100, précédemment publiés. Les nouvelles séries basées 1981 = 100 peuvent être raccordées à leurs séries équivalentes basées 1977 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de janvier 1986, et répétés dans les numéros de février et de mars 1986, de la présente publication. Outre le changement dans la période de pondération et de référence, de légères modifications ont été apportées à la structure et à la méthodologie. Ainsi, l'ancienne composante principale nommée Matières textiles a été dissoute, et les produits qui en faisaient partie ont été reclassifiés comme suit: le coton se retrouve maintenant avec les substances végétales, et la laine, avec les animaux et substances animales. Ne satisfaisant pas à la définition de matières brutes, les fibres synthétiques ont été exclues du nouvel indice. Par ailleurs, les échantillons à la fois des produits et des répondants ont été révisés et mis à jour afin d'obtenir des estimations plus fiables des mouvements de prix. En conséquence, plus de détails sont maintenant disponibles pour certains produits.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occured for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1981 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These weights are shown in the accompanying table.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

Les pondérations furent dérivées des tableaux d'entrées-sorties de 1981, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires. Ces pondérations sont présentées au tableau ci-joint.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$$\mathsf{P}_{\mathsf{t/o}}^{(\mathsf{agg})} \ = \ \sum_{\mathsf{i}} \ \frac{\mathsf{w}^{\mathsf{i}}}{\sum_{\mathsf{w}^{\mathsf{i}}}} \ \cdot \ \mathsf{P}_{\mathsf{t/o}}^{\mathsf{i}}$$

| (agg) |              |        |          |        |        |    |      |
|-------|--------------|--------|----------|--------|--------|----|------|
| Pt/o  | denotes      | the    | compos   | site   | price  | ir | ndex |
|       | movement     | betwe  | een the  | base   | period | 0  | and  |
|       | time t for t | he def | ined ago | gregat | e;     |    |      |

wi is the transaction value of the element i in 1981;

 $P_{t/0}^{'}$  is the price index for element i, meaning its price change from the base period to time t;

 $\sum_{i} \qquad \text{indicates summation over all elements i in the defined aggregate}.$ 

(agg)
Pt/0 dénote le mouvement de l'indice composite de prix entre la période de référence o et la période courante t pour l'agrégat spécifié;

wi est la valeur de transaction de l'élément i en 1981;

est l'indice de prix de l'élément i, c'est-à-dire son changement de prix de la période de référence o à a période courante t;

Σ<sub>i</sub> indique la sommation sur tous les éléments i faisant partie de l'agrégat spécifié.

Within individual commodity indexes, the prices are weighted according to their market share in 1981 or a more recent year. In a few instances, where data are not available, the price quotations are equally weighted.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

L'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché en 1981 ou pour une année plus récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, ou téléphonez au (613)951-9607.

# ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1981 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The midexes have 1981 as a time reference base and the weights used are 1981 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1981 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 1979. Indexes for the current year and the previous year are subject to revision.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

# INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1981 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril, d'août et de décembre. Les indices ont comme période de référence 1981, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1981, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1981 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 1979. Les indices de la présente année et de l'année précédente sont sujets à révision.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, ou téléphonez au (613)951-9607.

# INTERESTED IN ACQUIRING A CANADIAN ORIGINAL?

Then *Canadian Social Trends* is the acquisition for you. A first on the Canadian scene, this journal is claiming international attention from the people who need to know more about the social issues and trends of this country.

Drawing on a wealth of statistics culled from hundreds of documents, *Canadian Social Trends* looks at Canadian population dynamics, crime, education, social security, health, housing, and more.

For social policy analysts, for trendwatchers on the government or business scene, for educators and students, *Canadian Social Trends* provides the information for an improved discussion and analysis of Canadian social issues.

Published four times a year, *Canadian Social Trends* also features the latest social indicators, as well as information about new products and services available from Statistics Canada.

# VOUS DÉSIREZ FAIRE L'ACQUISITION D'UNE OEUVRE ORIGINALE?

Alors **Tendances sociales canadiennes** est la publication qu'il vous faut. Première en son genre sur la scène canadienne, cette revue retient l'attention des gens d'ici et d'ailleurs qui désirent en savoir plus sur les questions sociales de l'heure au pays.

À l'aide d'abondantes statistiques extraites de nombreux documents, **Tendances sociales canadiennes** brosse le tableau de la dynamique de la population canadienne, de la criminalité, de l'éducation, de la sécurité sociale, de la santé, de l'habitation et de plusieurs autres sujets.

Que ce soit pour les analystes de la politique sociale, les analystes des tendances oeuvrant au sein des administrations publiques et du monde des affaires, les enseignants ou encore les étudiants, *Tendances sociales canadiennes* dégage l'information nécessaire à des discussions et des analyses approfondies relativement aux questions sociales.

**Tendances sociales canadiennes** présente également les plus récents indicateurs sociaux de même que des renseignements relatifs aux produits et services qu'offre Statistique Canada.

# How long would it take you to get 10,000 price quotes from 3,500 companies?

A lot longer than it takes to open a copy of **Industry**Price Indexes. Subscribe now, for the most extensive data available on Canadian manufacturing selling prices.

**Industry Price Indexes** are indispensable if you need current, consistent and reliable reports on price fluctuations at the Canadian factory gate. Uses include preparing escalation contracts, inventory management, charting trends, forecasting price changes or compiling data to create your own index.

This monthly publication covers raw materials, energy and over 700 commodities by 20 major groups. Items listed range from fish fillets to industrial furnaces, cattle to crude oil. Most commodities are reported at the national level, but some are given on a regional basis.

Each issue also provides a historical perspective, with tables of annual averages and monthly price indexes of commodities for the past five years.

As the only periodical of this scope and detail **Industry Price Indexes** is the recognized authority on changes in the selling prices of Canadian manufactured goods.

Get the facts.

A subscription to the monthly **Industry Price Indexes** (Catalogue No. 62-011) is \$182 in Canada, US\$218 in the United States and US\$255 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1 A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

# Combien de temps vous faudrait-il pour obtenir 10 000 propositions de prix de 3 500 compagnies ?

eaucoup plus de temps qu'il n'en faut pour lire un exemplaire d'Indices des prix de l'Industrie. Abonnezvous dès maintenant afin d'avoir accès aux données les plus complètes possible sur les prix de vente des manufacturiers canadiens.

Indices des prix de l'industrie est indispensable si vous avez besoin de rapports à jour, uniformes et fiables au sujet des fluctuations des prix à la production au Canada. Ces indices peuvent servir notamment à préparer des contrats d'indexation, à gérer des stocks, à suivre des tendances au moyen de graphiques, à prévoir des fluctuations de prix ou à compiler des données pour concevoir votre propre indice.

Cette publication mensuelle porte sur les matières premières, l'énergie et plus de 700 produits classés dans 20 grandes catégories. Les articles répertoriés vont des filets de poisson aux fours industriels en passant par les bovins et le pétrole brut. Pour la plupart des produits, les statistiques ont une portée nationale; toutefois, pour certains, elles revêtent un caractère régional.

Chaque numéro donne également une perspective historique; des tableaux indiquent les moyennes annuelles et les indices des prix mensuels des produits au cours des cinq dernières années.

Indices des prix de l'industrie est le seul périodique aussi complet et détaillé. Il fait autorité en ce qui touche les fluctuations des prix de vente des marchandises fabriquées au Canada.
